

Program Monitoring

Lecture 2 : Introduction to AspectJ

May 6, 2009

AspectJ is an extension of Java that supports aspect-oriented programming. For our purposes we shall use AspectJ for program instrumentation and monitoring. This lecture is an introduction to AspectJ, with specific focus on the language constructs. In the subsequent lecture 3 we shall further study how to write monitors using AspectJ.

Reading and Installation

Same as note 1.

Assignment

None - focus on the project for part I until its deadline.
